Tornado Rain Head Pty Ltd
Att: Mr. G Ewen
13 Sandra Place
Welshpool WA 6106

Dear Sir,

As requested on the 19/03/2009 the undersigned witnessed the flow capacity testing of the following Tornado rain heads.

1. Tornado Micro
2. Tornado 100
3. Tornado inline Patio gutter
4. Tornado 150

All test equipment used was within calibration date and in good working order.

The flow meters used had been checked in house for compliance with the master meter which was calibrated and certified at the Water Corporation Meter Testing Laboratory.

All 4 samples were tested in general to Australian Standards flow test procedures.

I certify that the attached certificates are a true record of the testing carried out by the Western Irrigation personal.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'H. Vandenberg', is written over a light blue circular stamp.

Hank Vandenberg
